## Natural avalanche in Mirror Basin

Beehive Peak Northern Madison 4/7/2020 Code HS-N-R2-D2-O Elevation 10200 Aspect N Latitude 45.35390 Longitude -111.40500 Notes

From obs (4/8/20): "My partner and I noticed this <u>slide</u> as we summited 10602 at approximately 10:30am, which is when I took the first photo and was able to capture the full runout. After our descent of the peak, we skinned back up to the <u>slide</u> to get a better look (the second photo). The <u>slide</u> appeared approximately a day old, with a crown 1-2 feet deep, on an almost directly north-facing <u>aspect</u> at 10200" elevation. It broke right along the rocks that had heated up in the sun, and was around 200-300 feet at its widest. We did not get close enough to determine which layer failed (suspected wind from the heavy wind-crust in the neighboring area), but the debris at the bottom indicated it was a wet <u>slide</u>."

Number of slides 1 Number caught 0 Number buried 0 Avalanche Type Hard slab avalanche Trigger Natural trigger R size 2 D size 2 Bed Surface O - Old snow Problem Type Wind-Drifted Snow Slab Thickness 18.0 inches Vertical Fall 600ft Slab Width 200.00ft
