Specimen Creek

Date Tue, 12/21/2021 - 10:30 Activity Skiing

ECTP 8 @ 15cm 7800' E. on Specimen Ridge. LOC: Fist hard basal faces below a decomposing crust about 10cm off the ground Lots of whomping on lee and sheltered slopes. We noticed a few pinwheels at later in day below 7500'. Generally poor structure and poor strength. I don't know what SWAG notation for sagebrush is but lots of that...

Region Southern Gallatin Location (from list) Specimen Creek Observer Name Ryan Griffiths
