Activity

Skiing

Me and my buddy went on a tour today up Sheep Creek to check out the new snowfall and conditions in the area. We dug a pit on a S\SE aspect at 9500 feet and found about 100cm snowpack. Last weeks snowfall fell right side up and was not able to find layers until the bottom 6 inches of the snowpack. About 6 inches from dirt, there is a minor crust layer with small facets under the crust. We did not find the new snow to be reactive to this layer during our column test...

Region

Cooke City

Location (from list)

Sheep Creek
