Natural Wind slabs in Hyalite

Maid of the Mist Northern Gallatin 12/17/2022 Code SS-N-R1-D1.5-I Elevation 9600 Aspect NE Latitude 45.41640 Longitude -110.97000 Notes

Went on a tour today with a buddy and traveled through twin falls basin as well as the maid. We skied a NW slope off of Palace Butte and found touchy conditions below the ridge line, but great skiing in the trees. We also skied the bowl of Arden peak. We observed numerous recent wind slabs that released naturally in the past 24 hours on NE and E aspects with some crowns starting to get covered up throughout the day. Judging from afar, I would estimate these crowns to be 6 inches to 1.5 feet deep.
