

Photo attached of a recent avalanche near Cooke, on the north face of Mt. Republic. Steep, rocky, north facing. Everything that I have been seeing the last 2 days has been similar: steep, rocky north faces above tree line, often associated with wind loading, and cornices. We observed 4 other similar avalanches yesterday, like the photo attached.

Advisory Region
Cooke City
Longitude

-109.94W

Latitude

45.02N

Avalanche Details: Steep, rocky, N-facing avalanches: Cooke
