

Remote Triggered Avalanche, Mineral Mountain

Date

Sun, 04/02/2023 - 17:55

Activity

Skiing

From IG: “Wanted to touch base about an avalanche we triggered on the shoulder of Mineral Mountain today. While skinning up there was obvious wind loading coming from the south. I kicked around a bit near the edge of the ridge (no cornice) and remote triggered this slide from 20’ away. It broke 12-18” deep, and propagated 700-800’ wide. Ran full length of the slope into old growth trees 1200’ below. Would estimate R4 D3. We found good stable skiing on the south aspect (~35°)”

Region

Cooke City

Location (from list)

Mineral Mountain
