

Large Natural Wet Avalanche on Wilson Pk

Wilson Peak

Northern Madison

5/1/2023

Code

WS-N-R3-D4-O

Elevation

10000

Aspect

S

Latitude

45.31790

Longitude

-111.33600

Notes

Natural R3-4, D4 ripped out a large chunk of the south face of Wilson during the last warm period I would assume. Debris everywhere and one large boat-sized pile even scoured a path further down than the rest of the debris. Looked to be a mix of wet loose and wet [slab](#) release from high up. Alpha angle at the bottom of the debris was 25 degrees

Number of slides

1

Number caught

0

Number buried
