

Bacon Rind Test Scores and Observations

Date
Thu, 02/22/2024 - 13:00
Activity
Skiing

My brother and I toured into the skillet at Bacon Rind. We dug a pit at the top of the skillet, east aspect, 9000 feet. Total snow depth was 115cm. We observed CT14 and ECTP25, 2.5 feet or 75 cm down, propagating on large old facets below a hard slab. That slab was dense and carrying some energy when collapsed in our column tests. We also observed multiple suspected week old natural avalanches on northeast aspects.

Region
Southern Madison
Location (from list)
Bacon Rind
Observer Name
Harrison Bigos-Lowe
