

Avalanches above Cleos

Date

Sat, 02/24/2024 - 13:30

Activity

Ice Climbing

Several small slabs pulled out above The Shimmy, left of Cleo's. Observed from across the valley while climbing the Dribbles. Did not observe them run, only saw the crowns. Unknown date of avalanches, but crowns were quite distinct from across the way.

Lots of wind transport all day.

Region

Northern Gallatin

Location (from list)

Hyalite - main fork

Observer Name

Matt Zia
