

Large Natural Avalanche on Chico Baldy

Out of Advisory Area

3/2/2024

Code

N

Aspect

E

Notes

6" snow since Friday at 6000' in Mill Creek, very strong winds last night. Observed this large avalanche on an east face at treeline, appears to have failed on the weak snow at the base of the snowpack. Additional crowns observed in the bowls and chutes above it (these have been repeat offenders this season).

Number of slides

1

Number caught

0

Number buried

0

Trigger

Natural trigger

Problem Type

Persistent Weak Layer
