

Hard wind slabs in Hyalite

Date

Sat, 11/02/2024 - 03:25

Activity

Skiing

From e-mail: "Photo attached from near top of hyalite peak yesterday eve , 11/2. Cracking in recent hard [wind slab](#), I had to really jump hard to make this. Walked on many other hard slabs that were well bonded. Highly variable snowpack. I think you'd be most likely to get into trouble by popping out a small hard [slab](#) pocket like this and getting magic carpeted into some thinly covered terrain."

Region

Northern Gallatin

Location (from list)

Hyalite - main fork

Observer Name

Ben VandenBos
