

wind loading in hyalite

Date

Wed, 11/20/2024 - 12:00

Activity

Ice Climbing

Tons of wind transport all over Hyalite. Gullies were spindrift torrents most of the day. Ridge lines had plumes for most of the day too. Small wind slabs building in the upper Mummy gully, approximately 6"-8" thick at most and 1F to P hardness. Some localized cracking around our boots but nothing more.

Region

Northern Gallatin

Location (from list)

Hyalite - main fork
