Activity

Skiing

Dug a pit on divide peak on a southwest facing aspect that was about 210cm deep. ECTX, PSTX on sun crust 15cm down from surface that the new snow had fallen on. Entire snowpack 4F-1F from the thin sun crust to the buried facet layer than began around 165cm deep. Saw evidence of some wind slabs beginning to form near the ridge line. It was cold.

Region

Northern Gallatin

Location (from list)

Divide Peak
