 Stability Test Notes
116: 2xslab load on2ndPST

Layer No
115.5-116

Notes: Prior pit to this lower on slope, at top of steeper meadow had ECTNs at storm interfaces, no propagation, or obvious SH layers. No obvious until CT, and then ECTP 13 was a bit of a surprise. Shorter PST cut (15/100) was result of placing slab from previous test PST, essentially doubling the load.
